(54) BEAD SCREEN

(57)Abstract:
PURPOSE: To provide the bead screen which projects the image to be projected from a video projector, etc., drastically decreases the reflection of incoming light by absorbing the wavelength of a higher specific visual sensitivity among the wavelength spectra of the incoming light and forms the bright projected image having a contrast even in a relatively bright place.
CONSTITUTION: Any of the beads 1, base material 3 or a protective film 6 provided on the surface of the bead 1 at need of the bead screen formed by fixing the beads 1 by the adhesive 2 to the surface of the base material 3 is subjected to coloration to absorb the wavelength of the light between about 530 to about 640nm. Consequently, the wavelength near 550nm of the high specific visual sensitivity among the wavelength spectra of the incoming light is absorbed and the reflection of the incoming light is drastically decreased. The bright projected image having the contrast is thus obtd. even in the relatively bright place.

LEGAL STATUS

[Date of request for examination]

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number]

[Date of registration]

[Number of appeal against examiner's decision of rejection]

[Date of requesting appeal against examiner's decision of rejection]

[Date of extinction of right]
